

Fixing the bug:

How to remove the annoying Mac OS X .DS_Store files from a Git repository?

Remove existing files from the repository:

Open Terminal:

- 1) `cd < project path>`
- 2) `find . -name .DS_Store -print0 | xargs -0 git rm -f --ignore-unmatch`
- 3) Add the line - `.DS_Store`

to the file `.gitignore`, which can be found at the top level of your repository (or created if it isn't there already). You can do this easily with this command in the top directory

- 4) `echo .DS_Store >> .gitignore`
- 5) Then
`git add .gitignore`
`git commit -m '.DS_Store banished!'`
